Professional Profile

AI Automation Engineer who builds production automation systems for real businesses — not demos. I design end-to-end pipelines that connect ordering platforms, documents, AI models and communication channels using n8n, Python and modern AI APIs, running on self-hosted Linux infrastructure I administer myself.

Currently in production: a document automation system for a food-delivery business that turns every order into a print-ready accounting document, delivers it, and records it in a daily register — replacing several hours of manual work per day.

Practical Project (in production)

Invoice & registry automation for a food-delivery business (Kyiv)

github.com/nikita-automation/choice-invoice-automation

- **~70 accounting documents per day** generated automatically, replacing hours of manual Excel work
 - **Event-driven architecture:** ChoiceQR webhook → n8n → ChoiceQR Open API enrichment → Python/ReportLab PDF generator → delivery via e-mail + Google Drive archive
 - **Correct accounting:** applies discounts (promo codes) and surcharges (cutlery, packaging, delivery); dates the document by the delivery date; totals match the customer receipt
 - **Real-time daily register in Google Sheets:** each order appends a row (no., address, amount) to that day's tab with a running total — replacing manual copying of addresses out of the PDFs
 - **Idempotency (SQLite):** webhook retries and manual replays are safe; the register is rebuilt in full from the database on every run
 - **Data-retention-as-code:** cron + scheduled n8n workflow delete documents after 3 years, matching the client's updated privacy policy
 - OAuth2 integrations with three providers (ChoiceQR, Google Drive, Google Sheets/Gmail); all secrets in n8n's encrypted credential store
-

Other Portfolio Projects

- **AI Reels Analysis** — collects short-form videos via Apify, transcribes with Whisper, analyses with AI, stores structured results in Airtable
 - **AI Telegram Assistant** — self-hosted assistant (OpenAI) with conversation context and routing
 - **AI WordPress Publisher** — automated creation and publishing of WordPress posts via the REST API, with a draft workflow
 - **AI Call Analysis System** — transcription and AI analysis of calls into summaries, action items and follow-ups
 - **AI Voice Generator** — ElevenLabs voice generation from approved scripts, state-managed in Airtable
 - **AI Avatar Generator** — HeyGen avatar videos from Airtable with render monitoring and automatic write-back
-

Technical Skills

Automation & Integration: n8n (self-hosted, incl. management via REST API), Make.com, webhook architectures, REST APIs, OAuth2 flows, JSON mapping, idempotent pipeline design, error handling & retries

Programming: Python (automation services, PDF generation with ReportLab, data parsing), JavaScript (n8n code nodes), SQL (SQLite, PostgreSQL fundamentals), Bash

AI Services: OpenAI API (GPT, Whisper), prompt engineering, ElevenLabs, HeyGen

Infrastructure: Linux (Ubuntu VPS) administration, Docker, cron, Git/GitHub, backup & data-retention automation

Platforms: Telegram Bot API, WordPress REST API, Google Workspace (Drive, Sheets, Docs, Gmail/SMTP), Airtable, Apify, ChoiceQR Open API

Education

Bachelor of Management — completed university degree, Ukraine

Languages

- Ukrainian — native
 - Russian — native
 - German — C1 (Deutsch Prime certificate, 2026)
 - English — A2
